

FIELDFLEX

MOBILE MAINTENANCE SERVICES

PRODUCT HIGHLIGHTS

- receive new work orders and information updates directly on the mobile device as soon as they are dispatched
- create new work orders, update information on-the-fly and sync back to the host automatically
- record resources at the point-of-activity, including time, parts and other costs
- prioritize and route service tickets in the field and communicate status updates to the customer in real-time
- access documents, such as floor plans, images and reference manuals from the mobile application

FieldFLEX™ provides you with powerful mobile workplace software to track & manage your assets, maintenance and facility operations throughout your organization.

Maintenance and Field Service technicians use FieldFLEX™ to record maintenance activities on a mobile device. FieldFLEX allows your facilities workforce to optimize their time, beginning to end. At FieldFLEX we have created a series of user friendly mobile forms for quick access to update maintenance and inspection data, repairs, resources consumption, and updates to asset information at the point-of-activity. These forms are easily configurable to suit your business processes and have the ability to connect to multiple data sources. The flexibility allows you to control data flows to and from the mobile devices. FieldFLEX utilizes existing network, communications and IWMS platform infrastructure to deploy mobile wireless devices to field service technicians.
