- real-time performance feedback
- shorter decision cycle
- stronger decision support

MOBILE SITE PORTAL

The FieldFLEX Mobile Site Portal Framework for Mobile Enterprise Engagement

The FieldFLEX Mobile Site Portal Framework offers companies a configurable mobile platform to engage employees in a new way. As mobile users enter their buildings and navigate their day the FieldFLEX engagement platform acts as their personal kiosk or concierge, helping to book meetings, make service requests, discover in-building and local amenities, and much more.

Companies configure the mobile engagement platform by simply plugging-in existing mobile apps, linking to external mobile apps and websites, or building custom content tailored to their users. FieldFLEX has put an emphasis on thoughtful mobile design to create a great mobile user experience that includes mobile user engagement with their physical environment. The Mobile Site Portal Framework is IoT-ready and can easily utilize existing or inexpensive infrastructure.

Apart from the personal user benefits, such as indoor positioning, locating & navigation, personalized data and location-based task automation, companies can collect data in real-time, improve overall staff productivity, monitor workplace utilization, and ultimately use the platform to support key real estate decisions.
